SUMMER INTERNSHIP PROJECT : Online Auction System

CREATING A FUTURE-READY WORKFORCE

Student Name : Mahesh Pendem

Student ID : STU662cdb07a52061714215687

College Name : RGUKT Basar

Abstract

1 **Objective** – A web-based platform that facilitates real-time online auctions, connecting buyers and sellers seamlessly.

2 **Technology Stack** – Built using React.js for the frontend and Express.js for the backend, ensuring a responsive and scalable system.

3 **Key Features** – Includes user authentication, secure bidding, real-time updates, and a reliable auction process.

4 **Impact & Use Case** – Enhances accessibility and efficiency in auctions, providing a digital marketplace for diverse users and products.

Project Overview : Online Auction System

- Web-based platform for secure, real-time bidding.
- Ensures fairness, transparency, and accessibility for buyers & sellers.
- Built using MERN Stack (MongoDB, Express.js, React.js, Node.js).
- Responsive UI for seamless experience across devices.
- Real-time updates using efficient data fetching techniques.
- Data persistence ensures auction details and bids are securely stored.
- Developed under AICTE TechSaksham Internship with Edunet & EY GDS.

Proposed Solution : Online Auction System

- **Secure User Authentication**– Ensures safe access for buyers and sellers with role-based permissions.
- **Real-Time Bidding Updates**– Ensures smooth and instant bid tracking without delays.
- **Automated Auction Process** – Manages bidding, closing auctions, and determining winners automatically.
- **Scalable** & **Efficient Architecture** – Built using MERN Stack for performance and reliability.
- **User-Friendly Interface**– Responsive React.js UI for seamless navigation across devices.
- **Auction History** & **Tracking**– Allows users to view past auctions, bid history, and transaction details.
- **Notifications** & **Alerts**– Sends real-time updates on bids, auction status, and important events.
- **Secure Data Storage**– Uses MongoDB to ensure reliable and safe storage of auction records.

Technology used : Online Auction System

- **Frontend** – **React.js** ◆ Builds a dynamic, responsive, and user-friendly interface.
- **Backend** – **Node.js** & **Express.js** ◆ Handles business logic, API requests, and auction management.
- **Database** – **MongoDB** ◆ Stores user data, bids, and auction details securely.
- **Authentication** – **JWT** (**JSON Web Token**) ◆ Ensures secure login and role-based access control.
- **State Management** – **Redux** ◆ Manages auction state and user interactions efficiently.
- **Styling** – **CSS** ◆ Enhances UI with a clean and modern design.
- **Data Fetching** – **Axios** ◆ Facilitates smooth and fast communication between frontend and backend.
- **Version Control** – **Git** & **GitHub** ◆ Tracks changes and enables collaborative development.

CERTIFICATE
OF APPRECIATION

Proudly presented to

MAHESH PENDEM

STU ID: STU662cdb07a52061714215687

for successful completion of the 6 weeks of internship in collaboration with
EY Global Delivery Services & AICTE on
Building Modern Web Applications with MERN Stack
under the **Next Gen Employability Program**
from **February 10, 2025- March 21, 2025.**
